

A scatter plot showing the relationship between the number of species (S) and the number of samples (n). The x-axis represents the number of samples (n) and ranges from 100 to 400. The y-axis represents the number of species (S) and ranges from 0 to 100. The data points show a rapid increase in species richness as the number of samples increases, eventually leveling off around 80 species.
